

The image features the Google logo in a light red color, centered against a dark blue background. The logo is composed of the letters 'g', 'o', 'o', 'l', 'e', and 'm'. The first 'o' is stylized with a vertical line extending downwards to a second circle. The background is filled with a complex network of thin, light red lines connecting numerous semi-transparent, dark red circles of varying sizes, creating a web-like or molecular structure.

VISION

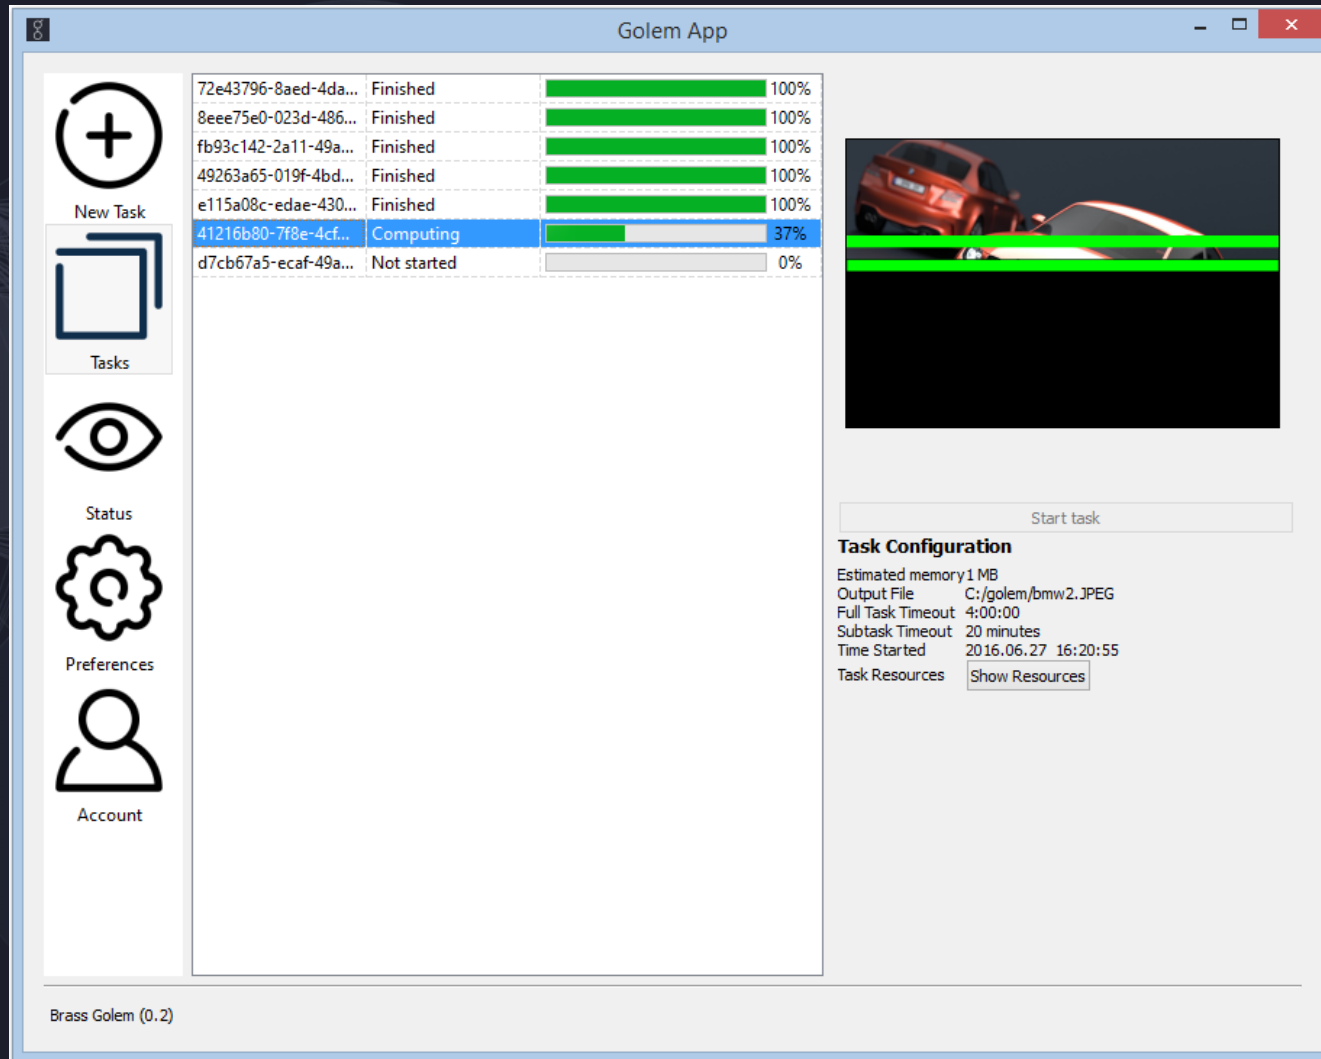

GOLEM: THREE SIDES OF THE ECOSYSTEM

GOLEM: THREE SIDES OF THE ECOSYSTEM

features	incentives
Golem is a felxible platform to deploy and monetize software.	Software developers use Golem as a distribution channel, associated with access to the hardware.
Golem offers tools to execute computing-intensive tasks .	Task requestors get access to affordable and scalable solutions, which combine hardware and software.
Golem combines and utilizes (almost) any kind of existing computing hardware .	Hardware providers get paid for renting out their hardware.

GOLEM 0.2 - WORKING PROOF OF CONCEPT

This is screen from the alpha. Golem's Testnet is alive and you can try it anytime.

HISTORY LESSON

WHAT HAPPEND IN THE '80S?

WIKIPEDIA, **HISTORY OF PERSONAL COMPUTER:**

In the long run, IBM's biggest role in the evolution of the personal computer was to establish the de facto standard for hardware architecture amongst a wide range of manufacturers.

IBM's pricing was undercut to the point where IBM was no longer the significant force in development, leaving only the PC standard they had established.

Emerging as the dominant force from this battle amongst hardware manufacturers who were vying for market share was the software company Microsoft that provided the operating system and utilities to all PCs across the board, whether authentic IBM machines or the PC clones.

https://en.wikipedia.org/wiki/History_of_personal_computers#The_IBM_PC

HISTORY LESSON

HARDWARE ALONE DOES NOT MATTER

SO, WHAT **REALLY MATTERS**:

Standard which unifies hardware

and

software which takes advantage of the standard.

THIS IS REALLY ABOUT SOFTWARE

WHAT GOLEM NEEDS TO TAKE OFF

GOLEM WILL THRIVE ONLY IF INTEGRATED WITH GREAT SOFTWARE:

- To achieve that, we need to get **developers** and **software companies** on board: only they [only you!] can deliver what people need and will use;
- **Initial promising integrations** done by the Golem Team;
- **Task API** and **task definition framework** - a way to integrate with Golem;
- Two key concepts for developers:
 - **GOLEM APPLICATION REGISTRY**
 - **GOLEM TRANSACTION FRAMEWORK**

DO YOU WANT TO INTEGRATE WITH GOLEM?

GOLEM APPLICATION REGISTRY

DECENTRALIZED AND SECURE WAY TO INTEGRATE WITH GOLEM NETWORK:

- Used by developers to publish their integrations;
- Anyone can register an application in the registry - there is no significant barrier to entry;
- Community-driven certification process:
 - anyone can issue a certificate [or blacklist] an application;
 - users decide who they want to trust.

DO YOU WANT TO INTEGRATE WITH GOLEM?

GOLEM TRANSACTION FRAMEWORK

DEVELOPER CAN DEFINE CUSTOM REWARD SCHEME:

- Every integration can use any custom reward scheme, as long as it is compliant with the transaction framework;
- Key parties are:
 - task creators [requestors]: how they pay for compute and software;
 - providers: how they are rewarded [eg. per hour? per task?]
 - developers: payment for software [free? donation? per node? per use? per CPU hour?]
- Ethereum network is used to transfer value and information between the peers.

WE KNOW HOW TO CREATE

The background features a network of dark blue spheres of various sizes, interconnected by thin, light blue lines, creating a complex, web-like structure. The word "golem" is centered in a white, lowercase, sans-serif font. The 'g' is stylized with a vertical line extending downwards from its bottom loop.
